

How to Use the Village Metrics Dashboard

Overview

The online Metrics Dashboard provides current information about service requests, outcomes, volunteers, and members for each Village. Users can view a Village, choose a reporting period, explore different measures, change how information is displayed, and download reports.

The dashboard updates automatically as new information is entered into the system. All figures reflect the selected Village and reporting period.

Hub-cancelled requests are excluded from all dashboard counts.

1. Select a Village

Click on your Village. Click Metrics below the Village name. Once selected, the dashboard will display that Village's metrics. The Village name shown in the page heading confirms which data you are viewing.

2. Choose a Reporting Period

				From	To
This year	Last year	Last 90 days	Last 30 days	01/01/2026	08/03/2026

You can select one of the preset reporting periods:

- **This year:** January 1 through the current date
- **Last year:** The previous calendar year
- **Last 90 days:** The most recent 90-day period
- **Last 30 days:** The most recent 30-day period

You may also create a custom reporting period:

1. Click the **From** field and select the beginning date.

2. Click the **To** field and select the ending date.
3. The dashboard will refresh to show activity during that period.

All totals, charts, percentages, and tables will reflect the selected dates.

3. Review the Summary Metrics

The four boxes near the top of the dashboard provide a quick overview:

- **Requests:** Total number of service requests submitted
- **Completed:** Requests successfully fulfilled
- **Cancelled:** Requests cancelled before completion
- **Unmatched:** Requests for which a volunteer was not secured

These figures provide an immediate picture of service volume and performance for the selected Village and time period.

4. Choose How the Data Is Displayed

Use the **Pie** and **Bar** buttons to change the chart format.

- Select **Pie** to see each category as a portion of the total.
- Select **Bar** to compare categories by volume.

Changing the chart format does not change the underlying data.

5. Adjust the Round-Trip Ride Count

Use the **Round trip = 2 legs** switch to control how round-trip rides are counted.

- When the switch is **on**, the outbound and return portions of a round trip are counted separately.
- When the switch is **off**, the entire round trip is counted as one service.

The information icon beside the switch provides additional guidance.

Because this setting can affect ride totals, users should confirm the selected option before comparing reports or sharing results.

6. Explore the Dashboard Tabs

The dashboard is organized into four areas.

Categories

This section shows how completed services are distributed across broad service categories, such as:

- Rides
- Errands
- Home Help
- Tech Support
- Other available service categories

The table displays:

- **Label:** Name of the service category
- **Value:** Number of services in that category
- **Pct:** Percentage of the selected total represented by that category
- **Total:** Combined number of services shown

Use the **Status** menu to choose which group of requests you want to examine, such as completed, cancelled, or unmatched requests.

Services

Select **Services** to examine more detailed information about the specific types of assistance provided within each service category.

This view can help users understand which services are requested most frequently and where additional volunteer capacity may be needed.

Outcomes

Select **Outcomes** to review what happened to service requests during the selected period. This may include completed, cancelled, or unmatched requests and any additional outcome measures available in the system.

This view is useful for identifying patterns, service gaps, and opportunities for improvement.

People

Select **People** to review information about the members receiving services and the volunteers providing them.

This section can help answer questions such as:

- How many members received assistance?
- How many volunteers provided services?
- Which members or volunteers had the greatest level of activity?
- How broadly are services distributed across the Village?

7. Use Additional Filters

Some sections contain their own menus or filters, such as the **Status** drop-down shown in the Categories view.

To use a filter:

1. Select the appropriate dashboard tab.
2. Open the available drop-down menu.
3. Choose the status, category, service, or group you want to examine.
4. Review the updated chart and table.

Filters work together with the selected Village and date range. If a result seems unexpected, confirm all three:

- Selected Village
- Reporting period
- Section-specific filter

8. Read the Chart and Table Together

The chart provides a visual summary, while the table gives the exact numbers.

The colors in the chart correspond with the colored markers beside each table label. Percentages may be rounded, so individual percentages may not always add up to exactly 100%.

For precise reporting, use the values in the table.

9. Download the Data

Download CSV

Select **Download CSV** to download the detailed information shown in the active section. A CSV file can be opened in Excel or another spreadsheet program for further analysis.

Before downloading, confirm that you have selected the correct:

- Village
- Date range
- Dashboard tab
- Status or other filter
- Round-trip counting option

Download PDF

Select **Download PDF** to create a formatted report of the dashboard. If an arrow appears beside the button, select it to review any available report or download options.

The PDF is useful for:

- Steering committee meetings
- Board reports
- Grant reporting
- Village performance reviews
- Sharing results with staff and volunteer leaders

10. Reset or Begin a New Review

To begin a different analysis:

1. Select the desired Village.
2. Choose a preset or custom date range.

3. Confirm the round-trip counting option.
4. Select the appropriate tab.
5. Apply any additional filters.
6. Choose the preferred chart format.

The dashboard will update to reflect the new selections.

Tips for Accurate Use

- Always confirm the Village name displayed at the top of the page.
- Check the **From** and **To** dates before interpreting the results.
- Remember that hub-cancelled requests are not included.
- Confirm whether round trips are being counted as one trip or two legs.
- Use the table values when exact figures are needed.
- Apply the same settings when comparing two Villages or two reporting periods.
- Download the report only after verifying every selection.
- Do not compare results generated with different ride-counting settings.
- Remember that current-year figures represent the year to date and may not be directly comparable with a complete prior year.
